

LESSON PLAN OUTLINE – Soft Skills-based Creative Drama Lesson

1. **Title of Lesson and Soft Skill:** Stranded at Sea with Collaboration

2. **Grade Level:** 2nd grade

3. Learning Standards:

Please use at least one Drama Illinois State Standard

Pr4.a. Demonstrate that there are multiple choices for every drama/ theatre work and select the most supportable choice for the moment.

Re7.a. Identify choices in a drama/ theatre work to understand personal reactions as a participant in a drama/theatre event.

4. Learning Objectives:

The Learners Will:

1. Learners will apply problem-solving skills, improvisation, and collaboration for teamwork through an improvisation activity with 100% accuracy by the end of class.
2. Learners will learn to identify choices made during the activity and understand the cause and effect of their actions by an end of the class discussion and being able to recall 60% percent of their choices as a group

5. Teacher Materials/Preparation:

Poly spots will be used as lilypads for students to hop in when they collect logs and sticks.

Bean bags will be used for students to look for as food.

Have the projector

Have a presentation with photos and videos of the events happening during the event. This will be integrated during the lesson while we are at sea. Audio and images of the sea will be projected representing our voyage.

Video/Sound effects

Google slides

6. Student Materials:

Piece of paper,

Positive attitude, willingness to participate

7. Bibliography:

Google slideshows, <https://youtu.be/v4C4keiF0tQ?si=FJ7WKepCK-aQtVmt>

8. Motivation and Introduction:

Activity/Method Title	Time	Description/Procedure
<i>Introduction/Anticipatory Set:</i> Introduction to our Journey	2 mins	Good morning everyone, how are you doing? Today we are going to go on a journey on a boat but before we do that I want you to find a partner that is not next to you.

		Did we all find a partner? Now I want you to ask each other how you're doing, and what plans you may have for the day. When you're all done discussing I want you to show a thumbs up.
--	--	--

9. Procedure:

Activity/Method Title	Time	Description/Procedure
<i>Learning Activity/</i> <i>Method #1:</i> Find food	5 mins	We are going to go on a mini journey to relax on a boat. The journey should not take too long so we don't really need to bring anything. What we will bring is life jackets just to be safe! If we get a little rowdy I will go "water wave" and you will make a wave motion with your hands and repeat "woosh". Students will make a wave motion with their hands while they say woosh. They will do this once I say "Water wave". Oh uh! The waves are getting a bit strong and are moving our boat. Oh no! It looks like it is going to rain! There will be audio and images showing rain with rain sounds. Oh no a shark accidentally bumped our boat and the boat is leaking! This will be demonstrated in us swaying to one side representing the boat being hit. Then I will state that the shark probably bumped us due to the strong waves from the wind and rain! We will sway in various directions showing the waves being strong. Then I will let the students know our boat appears to be leaking and that we need to steer quickly to an island. I will then ask them "Do any of you see an island nearby?" then I will tell them we are going to that island and to hold on tight. As I steer we will sway to the direction I am steering into. I will say "This is going to be a bumpy ride so hold on tight!"

<i>Learning Activity/</i> <i>Method #2:</i> Make a fire	10 minutes	Okay everyone lets safely get off our boat one by one! The students will then exit the boat slowly on the left side of the boat one step at a time. They will get off slowly without pushing each other. I will be outside of the boat guiding students and making sure they are being safe. Now that we are on the island we will need food, shelter, materials to fix our boat, and materials to create a fire with. We will break off into groups of 4 to think and look for items around the island to help us create food, shelter, fire, and things to fix our boat. I will then number them off from 1-4 so that they are in their groups. Group number 1 you will list 5 items for food that you will need to look for. Write them down in a piece of paper. Group number 2: You will create a list of things that will help us find and build shelter. Group number 3: You will create a list of items to create a fire! Group number 4: You will create a list of items to build our boat again. Once you finish creating those items I would like a thumbs up from the group. Then we will look for those items as a class! The bean bags will be placed in random locations around the room. Each person is to find one bean bag (item of food). When they find the item of food they will categorize them in groups based on the foods they found from the list they created.
--	-------------------	---

<i>Learning Activity/ Method #3:</i> Find shelter	5 minutes	It's getting cold. We need to make a fire to keep us warm. What items did group 3 list? It seems that the logs are across the river! Thankfully there are some lilypads that can help us get across. We will jump from one lilypad to the next lilypad until we get across all of the lilypads to find and carry sticks. This is when the poly spots will be used. We will go in groups of 4 and make sure that everyone has a log or sticks.
<i>Learning Activity/ Method #4:</i> Rebuild the boat	5 minutes	Now we need to repair our boat from the leak because we need to get home safely. What materials did group 4 list that we need to fix the leak in our boat? (sand can patch the leak on the boat including leaves) Lets go find the items that group number 4 listed and bring them to the boat. Based on the items that group 4 came up with, students will each find 1 material from either items listed and will create a group with those items. Once everyone gets with their group we will take turns as a group adding our items and building. I will tell students where to stand with their items. Let's begin building our boat! Make sure to work together. Yay we built our boat! Lets all go in one by one to get back home.

10. Closure:

Activity/Method Title	Time	Description/Procedure
<i>Closing:</i>	4 mins	Phew, that was a journey! As a class we will sit on the floor and circle up. I will ask them questions such as: What did we do as a group that helped us solve our issues? How did collaboration affect our situation? What was the effect of us being unprepared? And have students raise their hands. That is all I have for you! Great job at working together and getting back to safety!

11. Assessment:

For the assessment what I am assessing during the discussion is if students were able to notice that we worked in collaboration to solve the problems we had. I am also assessing if they noticed the cause and effect of choices we make such as how us not being more prepared caused issues for us but we were able to collaborate to fix our issues.

12. Theoretical Evaluation of Lesson:

Vygotsky's zone of proximal development. I used scaffolding to allow students to complete challenging tasks using collaboration from peers and myself.

Constructivist approach: the lesson builds knowledge through role playing, improvisation and a small class discussion.

Positive reinforcement is essential to keep students motivated and engaged.
